Ventilator Breathing Systems  
with Advanced Active Humidification

**flexicare**<sup>®</sup>  
TOTAL QUALITY - TOTAL CARE

## VentiMyst® Advanced Active Humidification delivers absolute humidity and manages excess rain-out

The use of respiratory humidifiers and heated wire breathing circuits for active humidification offers many benefits, but can also lead to problems caused by rain-out.

VentiMyst® addresses these problems by preventing the build-up of rain-out in the expiratory limb.

### Benefits of reduced rain-out with VentiMyst®

- Lower risk of contamination reaching either the ventilator or the patient
- Minimises need to open or break the circuit to remove excess rain-out, therefore decreasing the risk of Ventilator Acquired Pneumonia<sup>1</sup>
- Less risk of increased resistance to gas flow from fluid build-up in the expiratory limb or filter<sup>2</sup>

## VentiMyst® Moisture Management Technology

Reduced build-up of rain-out compared with standard corrugated heated wire limbs.

Standard Corrugated Heated Wire Limb with rain-out pooling in the limb corrugations

ventimyst®  
No build-up of rain-out

# ventiMyst®

## Advanced Active Humidification with Reduced Rain-out<sup>3</sup>

### Effective Moisture Management

The VentiMyst® technology reduces the build up of rain-out.

### Reduced Patient Risk

Reduced risk of accidental drainage of rain-out into the patient's airway.<sup>4</sup>

### Double Valve Auto-Fill Chamber

Two independent floats and primary and secondary valves regulate water flow into the chamber and provide assured protection against overfilling.

### Clinical Confidence

Reduced need to open or break the circuit with associated loss of PEEP and de-recruitment of the lungs.<sup>5</sup>

### Low Compliance Tubing

Accurate delivery of gas volumes and ventilation pressures to the patient.

### Temperature Transfer Efficiency

Helps prevent gas temperature loss and surface cold spots, minimising rain-out.
